DETAILED ACTION

Reasons for Allowance

1. The following is an examiner's statement of reasons for allowance: In response to the office action, dated 07/09/08, further in view of applicant's amendments filed on 11/27/08, the application has been carefully reviewed and respectfully considered.

According to applicant's remarks, as discussed in page 7 through 9, the rejected claim 11-15 and 37 has been cancelled by applicant, and 10-26, 37 and 39-40 also previously cancelled. Claims 1-9, 27-36, 38 and 41 are currently pending and were allowed as indicated in the last Office action. Therefore, the currently pending claims 1-9, 27-36, 38 and 41 are allowed for the reasons given below:

With respect to claims 1-9, the prior art searched and of record neither anticipates nor suggests a method of optically scanning a target item, comprising: configuring an optical scanning arrangement with predefined settings for scanning parameters appropriate to a photographic image; initiating a scanning operation; in response to the initiating, optically straining the target item using the predefined settings to form a digital image of the target item; and converting the digital image data file, wherein the scanning and the converting are performed automatically without intervention by a user, and wherein the predefined settings are not defined by the user.

Further, regarding to claims 27-34, the prior art searched and of record neither anticipates nor suggests, an image processing system, comprising: at least one image source, each image source for providing at least one digital image upon request; an image capture subsystem coupled to the at least one image source for requesting and receiving the at least one digital image from the at least one image source, the image capture subsystem further for associating a date with each digital image mad automatically convening each digital image into a corresponding image file; and a file system coupled to the image capture subsystem for automatically storing each image file in a selected one of a plurality of data folders, the selected data folder having a folder name indicative of the date.

As to claim 35, claim is allowed for the reasons the prior art searched and of record neither anticipates nor suggests a processor-readable medium having processor-executable instructions thereon which, when executed by a processor, cause the processor to: acquire a digital image from an image source; automatically convert the digital image into a data file having a date associated with the digital image; and store the data file into a data folder of a file system, the folder having a folder name indicative of the dare.

As to claim 36, claim is allowed for the reasons the prior art searched and of record neither anticipates nor suggests a processor readable medium having processor-

Art Unit: 2625

executable instructions thereon which, when executed by a processor, cause the processor to configure an optical scanning arrangement with predefined settings for scanning parameters appropriate to a photographic image; detect an initiation of a scanning operation; in response to the initiation, optically scan the target item using the predefined settings to form a digital image of the target item; and convert the digital image into a data file wherein the instructions to scan and convert are performed automatically after the initiation without intervention by a user, and wherein the predefined settings are not defined by the user.

As to claim 38, claim is allowed for the reasons the prior art searched and of record neither anticipates nor suggests an image processing system, comprising: means for configuring an optical scanning arrangement with predefined settings for scanning parameters appropriate to a photographic image; means for initiating a scanning operation; means for optically scanning the target item using the predefined settings to form a digital image of the target item; and means for converting the digital image into a data file, wherein the scanning and the converting are performed automatically without intervention by a user, and wherein the predefined settings are not defined by the user.

As to claim 41, claim is allowed for the reasons the prior art searched and of record neither anticipates nor suggests an image processing system, comprising: at least one image source, each image source for providing at least one digital image upon request; an image capture subsystem coupled to the at least one image source which

Art Unit: 2625

requests and receives the at least one digital image from the at least one image source, associates a date with each image, and automatically converts each image into a corresponding image file; and a file system coupled to the image capture subsystem which receives each image file from the image capture subsystem and automatically stores each image file in a selected one of a plurality of data folders, the selected data folder having a folder name indicative of the date.

Therefore, claims 1-9, 27-36, 38 and 41, are Allowed for the reasons the claimed invention are distinct from the prior art searched and of record neither anticipates nor suggests the claimed invention alone or in combination.
